Summary

Texas population change was extensive during the 1980s with the total population increasing from 14,229,191 in 1980 to 16,986,510 in 1990. This was an increase of 2,757,319 or 19.4 percent between 1980 and 1990. This report examines the ethnic components of this growth in the State as a whole and among the counties, metropolitan statistical areas, council of government regions, and places (towns and cities) in Texas. These patterns are examined for the mutually exclusive groups of Anglos, Blacks, Hispanics, and persons from Other ethnic groups. The report includes two volumes. The first volume contains extensive analysis and data related to ethnic change in the State. The second consists of three appendices. The first two show rankings of counties (Appendix A) and places (Appendix B) by the total population and by each of the Hispanic, Anglo, Black, and population of Other ethnic groups. Appendix C shows the population of counties and places in Texas according to the separate categories of race (White; Black; Asian and Pacific Islander; American Indian, Aleut and Eskimo; and Other racial groups) and Hispanic origin.

The results of the analysis show the following:

1. At the State level, growth was most rapid among Hispanics and persons from the Other ethnic group, moderately rapid among Blacks and slowest among Anglos. The total population increased by 19.4 percent from 1980 to 1990, but the Anglo population increased by 10.1 percent, the Black population by 16.8 percent, the Hispanic population by 45.4 percent, and the Other population by 88.8 percent. By 1990, the State's total population of 16,986,510 included 10,291,680 Anglos (60.6%), 1,976,360 Blacks (11.6%), 4,339,905 Hispanics (25.6%) and 378,565 persons (2.2%) of Other ethnic group origins. Of the total population increase of 2.8 million from 1980 to 1990, 34.1 percent was attributable to an increase in the Anglo population, 10.3 percent to the Black population, 49.1 percent to the Hispanic population, and 6.5 percent to growth in the Other population.

2. The patterns of growth among ethnic groups were generally pervasive across the counties of the State. Although 98 of the State's 254 counties showed decline in their total populations from 1980 to 1990, only 24 failed to show increases in their Hispanic populations and only 74 did not experience increases in their Other populations. However, 132 counties had losses in their Anglo populations and 141 experienced declines in their Black populations. In general:

-The State's counties with the largest total populations--Harris (2,818,199), Dallas (1,852,810), Bexar (1,185,394), Tarrant (1,170,103), El Paso (591,610), and Travis (576,407)--were also the areas of residence for the largest Anglo populations. Harris had an Anglo population of 1,528,113; Dallas, 1,115,096; Bexar, 496,149; Tarrant, 857,272; El Paso, 151,313; and Travis, 375,279. Only four other counties had Anglo populations exceeding 150,000 in 1990. They were Collin (226,654), Denton (232,885), Lubbock (151,414) and Montgomery (159,436). The largest Anglo population increases from

1980 to 1990 occurred in Collin (97,213), Denton (105,155), Tarrant (177,389), and Travis County (80,230). The largest declines in Anglo population were in Jefferson County (-19,652), Potter County (-9,779), and Ector County (-9,540).

-Harris County had the largest Hispanic population in 1990 (644,935) followed by Bexar (589,180), El Paso (411,619), Hidalgo (326,972) and Dallas County (315,630). The largest increases in Hispanic population from 1980 to 1990 were in Harris County (275,858), Dallas County (161,069), Bexar County (128,269), and El Paso County (114,618). A total of 48 counties increased their Hispanic populations by 100 percent or more from 1980 to 1990 and in 32 counties more than 50 percent of the total population was Hispanic by 1990.

-The Black population in 1990 and population change in the Black population from 1980 to 1990 were concentrated in large urban counties. In 1990, Harris County had a Black population of 527,964; Dallas, 362,130; and Tarrant County, 138,302. These three counties also had the largest numerical increases in their Black populations from 1980 to 1990 (Dallas, 76,343; Harris, 58,674; and Tarrant, 37,765). In fact, these counties plus Fort Bend (which increased its Black population by 25,546), Travis (16,576) and Bexar (13,326) Counties accounted for 80 percent of the total increase in the Black population from 1980 to 1990. Seventeen counties increased their Black populations by 100 percent or more. The largest decline in Black population was in Caldwell County (-1,136). Only three counties had 30 percent or more of their populations that were Black in 1990, Waller (37.36%), Marion (30.98%) and Jefferson (30.82%).

-The population in Other ethnic groups was quite small in 1990 (378,565 for the State) and was concentrated in Harris (117,187), Dallas (59,954), Tarrant (34,650), Bexar (18,709), Travis (18,441), and Fort Bend Counties (14,606). These same counties experienced most of the increase in the Other population from 1980 to 1990 (Harris, 55,437; Dallas 33,567; Tarrant, 21,822; Travis, 10,627; and Fort Bend, 10,097). A total of 54 counties increased their Other populations by 100 percent or more from 1980 to 1990.

3. The patterns for counties grouped by three different means were generally consistent with the trends for individual counties but also showed several unique patterns of importance. Among these were:

-When counties are grouped into metropolitan (including central city and suburban) and nonmetropolitan (including counties adjacent and those nonadjacent to a metropolitan county) county types, it is evident that population growth was most extensive in the State's suburban and central city counties, followed by nonmetropolitan adjacent, and nonmetropolitan nonadjacent counties. From 1980 to 1990, central city counties increased their populations by 1,883,810 (19.36%), suburban counties by 675,777 (42.88%), nonmetropolitan adjacent counties by 164,759 (8.73%), and nonmetropolitan nonadjacent counties by 32,973 (3.19%). As a result of such changes, the proportion of the State's population in central city counties

remained at 68.4 percent in 1990. The proportion in suburban areas increased 2.1 percent from 1980 to 1990, to 13.2 percent by 1990. Nonmetropolitan adjacent counties declined to 13.1 percent of the population by 1990 (down from 13.2% in 1980) and nonmetropolitan nonadjacent counties accounted for 6.3 percent of the State's population in 1990 (compared to 7.3% in 1980).

-Patterns of ethnic growth varied widely within metropolitan and nonmetropolitan types. Population change for Anglos accounted for less than their proportion of the population in all four metropolitan and nonmetropolitan county types but had their largest impact in suburbs where they accounted for 72 percent of the 675,777 increase in populations from 1980 to 1990. In nonmetropolitan nonadjacent counties, the Anglo population showed an absolute numerical decline. Hispanics and those in the Other ethnic group accounted for a greater proportion of the increase in population in each of the four county types than they were of the total population in each type. The growth of the Hispanic population was particularly notable. Hispanics accounted for 58.6 percent of the net increase in population in central city counties from 1980 to 1990, for 16.7 percent of suburban growth, and for 57.3 percent of the increase in populations in nonmetropolitan adjacent counties. In nonmetropolitan nonadjacent counties the increase in the Hispanic population was 41,004 compared to a total increase in such counties of 32,973. It was thus growth in the Hispanic population in such counties that offset loss in the Anglo population in order to create an overall pattern of growth in nonmetropolitan nonadjacent counties. Patterns for Blacks were less consistent across county types. The Black population contributed less to the net change in population than it was of the total population in each of the four county types but had its largest impact on central city areas where it accounted for 12.6 percent of the total population change in central city counties.

-Among the State's Metropolitan Statistical Areas (MSAs), patterns of change were highly variable during the 1980s. The Dallas MSA had the largest total population increase from 1980 to 1990 (595,984), followed by Houston (566,171), Ft. Worth-Arlington (358,915), and San Antonio (230,145). Houston remained the largest MSA in 1990, with a population of 3,301,937, followed by Dallas (2,553,362), Ft. Worth-Arlington (1,332,053), and San Antonio (1,302,099). Eight MSAs (Beaumont-Port Arthur, Brownsville-Harlingen, Corpus Christi, El Paso, Laredo, Lubbock, Odessa, and Wichita Falls) lost Anglo population and three lost Black population (Brownsville-Harlingen, Corpus Christi, and Laredo). All of the State's MSAs increased their Hispanic and Other populations. Five showed increases of more than 100 percent in their Hispanic and six had increases that large in their Other populations. As a result of such changes, five MSAs in Texas were more than 50 percent Hispanic by 1990--Brownsville-Harlingen, Corpus Christi, El Paso, Laredo, and McAllen-Edinburg-Mission--and five Texas MSAs had 300,000 or more Hispanics--Dallas (368,884), El Paso (411,619), Houston (707,536), McAllen-Edinburg-Mission (326,972), and San Antonio (620,290). The only MSAs with more than 100,000 Blacks were Dallas (with 402,662), Ft. Worth-Arlington (141,321) and Houston (596,860). The Other population was

largely concentrated in the Austin (21,340), Dallas (78,080), Houston (134,092), and San Antonio (19,745) MSAs.

-The data on Council of Government (COG) Regions suggest that the patterns of change for other county groupings apply to COGs as well. In addition, the data for COGs clearly show that rural areas in the Panhandle and areas in the Southeastern part of the State experienced population decline in the 1980s. Overall, the patterns for COGS show that the patterns of rapid growth among Hispanic and Other populations with slower growth for Black populations and even slower rates of growth for the Anglo population are pervasive across virtually all regions of the State.

4. Places in Texas (towns and cities) also showed dramatic patterns of ethnic change. Whether examined in terms of size categories or in regard to individual cities, it is evident that Texas large cities have shown very rapid increases in minority populations. An examination of the data for places suggests:

-When examined by the population size of the place in 1990, it is evident that the pattern of slow growth in small areas is pervasive across the State's smallest towns and cities. Population increases were very small in places with 10,000 or fewer residents, largest in the places of 10,001 to 100,000 and moderate in places of more than 100,000. Patterns by ethnicity varied widely by size of place, however. Anglo growth was largest among places in the small and moderate size of place categories and very small in those places with more than 100,000 persons. In fact, only three percent of the population increase from 1980 to 1990 in places with more than 100,000 population was a result of increases in the Anglo population. Black population increases were very small in the smallest sized places and largest in the larger places but, in all size of place categories, Black population growth was smaller than its proportion of the population. For Hispanics and persons from Other ethnic groups, the patterns were ones of very rapid population increases across nearly all size of places. For Hispanics, the rates of growth were particularly rapid in the State's largest places. Seventy-four percent of the net increase in population from 1980 to 1990 in places over 100,000 persons was attributable to the growth of the Hispanic population and the proportion of the population in these largest places that was Anglo was less than 50 percent by 1990 while the proportion that was Hispanic increased from less than 25 percent to more than 31 percent.

-The examination of patterns within individual places reveals substantial diversity both among places and among ethnic groups within places. Texas largest cities in 1990, Houston (1,630,553), Dallas (1,006,877), San Antonio (935,933), El Paso (515,342), Austin (465,622), and Fort Worth (447,619) were also among those areas with the largest Anglo populations. Houston had the largest Anglo population in 1990 (662,642), followed by Dallas (479,980), San Antonio (339,115), Austin (287,166), Fort Worth (252,786), and Arlington (205,408). Overall, however, Anglo growth tended to be slow across the towns and cities of the State. More than 700 places

showed declines in their Anglo populations from 1980 to 1990 and only 175 showed an increase in the proportion that Anglos were of their total population. The loss of Anglos from large central cities was especially evident in the 1980s. Houston's Anglo population declined by 171,419, Dallas' by 34,421, and Beaumont's by 9,218.

-The Hispanic population showed rapid population increases, particularly in Texas largest places. San Antonio continued to be the Texas city with the largest Hispanic population in 1990 (520,282), followed by Houston (450,483), El Paso (355,669) and Dallas (210,240). The largest increases from 1980 to 1990 were in Houston (169,152), Dallas (99,157), San Antonio (98,328), and El Paso (89,850). Only 220 places in Texas showed declines in their Hispanic populations from 1980 to 1990 and 982 places showed increases in the proportions of their total populations composed of Hispanics. By 1990, 158 places in Texas had populations that were at least 50 percent Hispanic.

-The Black population showed patterns among cities that were between those for Hispanics and Anglos. Houston continued to have the largest Black population in 1990 (447,144), followed by Dallas (290,882), and Fort Worth (96,928). Only four places increased their Black populations by more than 10,000 persons from 1980 to 1990. These were Dallas (an increase of 26,867), Arlington (16,886), Austin (14,233), and Houston (10,752). Overall, 402 places in the State showed declines in their Black populations and 446 showed either declines or no change in the proportions of their populations that were Black.

-The Other population is highly concentrated in a relatively few places in the State. Of the 318,497 persons of Other ethnic groups living in places in Texas, Houston had the largest population of persons in the Other group (70,234), followed by Dallas (25,775), Austin (15,764), San Antonio (13,276), Arlington (11,493), and Fort Worth (10,560). Only 33 other places had 1,000 or more persons from the Other population group.

Ethnic change in Texas during the 1980s was substantial and this diversity is likely to increase as a result of high rates of growth in minority populations. Analysis of patterns of change in the ethnicity of the Texas population will continue to be of importance in the coming years.

Introduction

Perhaps no aspect of population change in Texas has received more attention than the changing race/ethnicity of the State's population. The results of the 1990 Census indicate that such attention was merited; that ethnic change has been both extensive and pervasive. The extent and the distribution of this change is the topic of this report. After a brief discussion of the definitions of race/ethnicity as used in the report, we discuss how ethnic change has been distributed across the counties, metropolitan and nonmetropolitan areas, council of government regions, and across the towns and cities of Texas.

Defining Race, Hispanic origin and Ethnicity

The definitions of race and ethnicity used in population studies are often confusing because they are not mutually exclusive categories. In both the 1990 and 1980 Censuses, two separate questions were used to assess these factors. One question asked respondents to indicate whether each member of the household was white, black, American Indian, Eskimo, Aleut, Asian or Pacific Islander, or a member of another racial group. A second question asked respondents to indicate if each member of the household was of Hispanic origin or not of Hispanic origin, and asked the respondent to indicate of which of several Hispanic groups they were a member. Therefore, as used in the census, Hispanic is not a racial category and black, white, etc. are not ethnic categories. Hispanics can be of any race and persons of any race can be Hispanic.

For many purposes, however, it is useful to define a mutually exclusive set of groups that combine information from the race and Hispanic origin questions in the census. This can be done by subtracting the number of Hispanics by race from the total number of persons by race. This

results in the familiar ethnic categories of Anglos, Blacks, Hispanics (of all races), and several groups referred to by Other race-based categorical names. This procedure is recommended by the fact that Anglo is a commonly recognized ethnic category consisting of nonHispanic whites and by the fact that most of the persons who reported their race as Other in 1990 were apparently Hispanics who chose the racial status of "Other", perhaps because they did not see themselves as being a member of the groups referred to in any of the other response categories. As a result, of the 1,804,780 persons in the Other racial category in Texas in 1990, 1,782,843 (98.8%) were Hispanic. Subtracting Hispanics from the Other racial group results in only a small number of persons from a variety of other, relatively small, groups being left in the Other category. In addition, the remaining racial groups are affected relatively little by using this procedure. Only 45,272 Blacks (2.2%) were Hispanic and only 28,708 (7.5%) of the Other category--composed of Asians, Pacific Islanders, American Indians, or Aleuts--were Hispanic.

Because of the interest in using mutually exclusive categories, in this report we present data only for ethnic groups for which Hispanics by race have been subtracted from the total population by race to produce the mutually exclusive ethnic categories of Anglo, Black, Hispanic, and Other. It should be understood, however, that the category of Hispanic includes all Hispanics no matter what their race (e.g., Black Hispanics are considered to be Hispanic only and are not also counted in the Black category) and that each of the other ethnic groups consists only of the nonHispanic members of each of these groups. Those interested in data on race and Hispanic origin as derived directly from the two separate census

questions should refer to Appendix C which shows such information for counties and places in Texas.

Texas Population Patterns by Ethnicity, 1980 to 1990

Statewide Patterns

As is evident from an examination of the data in Tables 1 and 2, the rates of growth in Texas minority populations have been dramatic. The State's Hispanic population has increased by more than 110 percent since 1970 while its Black population increased by nearly 42 percent and its Other population by more than 657 percent from 1970 to 1990. Because the population base for the Other population is quite small however, it is growth in the Hispanic, and to a lesser extent the Black, population which has markedly changed in the last two decades. From 1970 to 1990, the Black population increased by more than 580,000 persons and the Hispanic population increased by 2,280,000. With only about one-third of the population base of Anglos, Hispanics have shown total population growth equal to 88 percent of the Anglo population increase of 2,601,000 from 1970 to 1990.

The growth of minority populations, particularly Hispanics, was especially rapid during the 1980s. In 1970, minority populations made up about 31 percent of the population and during the 1970s growth in minority populations accounted for 45 percent of the net increase in population in the State (see Table 2). By 1980, the proportion of the population composed of minority group members increased to 34 percent of the total population, but the minority population accounted for 66 percent of the net increase in population from 1980 to 1990. Hispanics alone accounted for 49 percent of the net increase in population from 1980 to 1990.

The net change in the proportion of the population in each ethnic group can be seen as largely involving a decrease in the proportion of the population that is Anglo and Black and increases in the proportions that are in the Hispanic and Other ethnic categories. From 1970 to 1990, the Anglo proportion declined by 8.1 percent and the Black population by 0.9 percent while the Hispanic population increased by 7.2 percent and the Other population's proportion increased by 1.8 percent.

In sum, then, an examination of the statewide patterns shows Texas to have a rapidly diversifying population base. By 1990, only 60 percent of the population was Anglo and minority populations accounted for two of every three of the net additions to the population from 1980 to 1990. Clearly, the patterns of rapid minority growth forecast by many analysts were realized in the 1980s.

Patterns of Ethnic Change in Counties

An examination of population growth among the counties of the State reveals several important patterns (see Tables 3 and 4). The pervasiveness of Hispanic growth, and the relatively less extensive growth among Anglo and Black populations, is evident in the data for counties. Of the State's 254 counties, only 26 (10.2%) did not show an increase in their Hispanic populations and only 74 did not show increases in their Other population category. On the other hand, 132 counties (52.0%) showed a loss in their Anglo populations and 141 (55.5%) experienced decline in their Black populations. As the data in Appendix A (which shows counties ranked by total population and then by Anglo, Black, Hispanic and Other populations in 1990) indicates, there were marked differences in the extent and rate of growth among ethnic groups within counties.

How extensive the growth in the Hispanic population has been is clear when one examines change in individual counties (see Table 3). Seven counties in the State increased their Hispanic populations by more than 50,000 persons between 1980 and 1990. These were Bexar County with an increase of 128,269, Cameron County (51,341), Dallas County (161,069), El Paso County (114,618), Harris County (275,858), Hidalgo County (96,760), and Tarrant County (72,247). In addition, 47 counties showed increases of more than 100 percent in their Hispanic populations.

By contrast, although the Anglo population base was more than three times as large as the Hispanic population base in 1980, only four counties had increases of 50,000 or more in their Anglo populations from 1980 to 1990--Collin (97,213), Denton (105,155), Tarrant (177,389) and Travis (80,230)--and not a single county increased its Anglo population by 100 percent.

For Blacks, only Dallas County with an increase of 76,343 and Harris County with an increase of 58,674 increased their Black populations by as much as 50,000 persons and only Denton and Fort Bend had numerical increases of more than 1,000 persons that also involved percentage increases of more than 100 percent. In the Other population, increases of more than 10,000 persons occurred in Dallas County (33,567), Fort Bend County (10,097), Harris County (55,437), Tarrant County (21,822), and Travis County (10,627) and 54 counties increased their Other populations by more than 100 percent from 1980 to 1990. The relative pervasiveness of growth among the different ethnic groups in counties is evident by examining Figure 1 which shows patterns of growth and decline (unshaded counties) by ethnicity in counties in Texas.

As a result of these changes, the proportion of counties' populations that was Hispanic tended to increase while the proportion that was Anglo and Black declined (see Table 4). Of the 254 counties in the State, 218 showed decreases in the proportion of their populations that were Anglo, 174 showed decreases in the proportion of their populations that were Black, but only 11 showed decreases in the proportion of their populations that were composed of Hispanics and 76 experienced decreases in the proportions of persons from Other ethnic groups in their populations.

Ethnic Change in Counties by Metropolitan and Nonmetropolitan Status

Another means of examining patterns of ethnic change in counties is to examine such change among counties grouped into four metropolitan and nonmetropolitan types. These types refer to the type and location of the counties. First, counties are grouped into metropolitan and nonmetropolitan types. Metropolitan counties are those which are part of a Metropolitan Statistical Area (MSA). An MSA is an urban center consisting of one or more counties officially designated by the Federal Office of Management and Budget as comprising an MSA, meaning that it has certain characteristics. These characteristics include a county with a central city of at least 50,000 persons or adjoining cities which together have such a population. These are metropolitan central city counties. In addition to such central city counties, counties adjacent to the central city county which have prescribed levels of density and are economically dependent on the central city county, as indicated by certain percentages of workers commuting to the central city county for employment, may also be included in the metropolitan area. Such counties are designated as metropolitan suburban counties. Nonmetropolitan counties are simply all of

the remaining counties that are not included in an MSA. These nonmetropolitan counties are further categorized into those that are adjacent to (share a common border with) a metropolitan county and those that are not adjacent to a metropolitan county (Figure 2 shows Texas MSA counties as defined for the 1990 Census). The data in Tables 5-8 show patterns for the four county types.

An examination of the data in Tables 5 and 6 shows Texas to be largely a metropolitan state. Of the State's population of 16,986,510 in 1990, 11,615,291 (68.4% of the total population) lived in central city counties, 2,251,764 (13.2%) in suburban counties, 2,051,706 (12.1%) in nonmetropolitan adjacent counties, and 1,067,749 (6.3%) in nonmetropolitan nonadjacent counties. Overall, 81.6 percent of Texas population was metropolitan and 18.4 percent nonmetropolitan in 1990.

Numerical change in the total population indicates that not only is the State predominantly metropolitan but 1980 to 1990 growth was centered in the metropolitan areas of Texas. Of the 2,757,319 increase in the State's population from 1980 to 1990, 1,883,810 (68.3%) occurred in central city counties, 675,777 (24.5%) in suburban counties, 164,759 (6.0%) in nonmetropolitan adjacent counties and only 32,973 (1.2%) in nonmetropolitan nonadjacent counties. Overall, 92.8 percent of all population growth from 1980 to 1990 was in metropolitan areas and only 7.2 percent in nonmetropolitan areas.

Compared to the State (see Table 5), central city counties increased their populations at about the same rate (19.36%) as the State as a whole (19.38%) while suburban counties increased their populations by more than twice (42.88%) the State's rate of growth. The increase in nonmetropolitan counties adjacent to metropolitan counties was less than one-half (8.73%)

the State's rate of growth and growth in nonadjacent nonmetropolitan areas (3.19%) was less than one-fifth of the rate of growth for the State as a whole from 1980 to 1990.

When examined by ethnic group, it is apparent that Hispanics and persons in the Other category had the highest rates of growth in all county types during the 1980s. Rates of growth for Blacks exceeded those for Anglos in central city and nonmetropolitan nonadjacent counties but were lower in suburbs and nonmetropolitan adjacent counties. Anglos showed absolute population declines within the nonmetropolitan nonadjacent areas while Black populations declined in nonmetropolitan adjacent counties.

Overall, when proportions of total growth from 1980 to 1990 are examined relative to the population in each of the four types of counties in 1980 (see Table 6), it is evident that metropolitan central city counties obtained approximately the same relative proportion of the total growth in population from 1980 to 1990 as they were of the population in 1990 so that their proportion of the total population remained at about 68 percent in 1990. Suburban areas by contrast accounted for 11.1 percent of the State's population in 1980 but received 24.5 percent of the growth between 1980 and 1990. As a result, the suburban proportion of the population increased from 11.1 percent in 1980 to 13.2 percent in 1990.

By contrast, nonmetropolitan counties (both adjacent and nonadjacent) failed to increase at a rate commensurate with their proportions of the population (see Table 6). Nonmetropolitan adjacent counties accounted for only 6 percent of population growth between 1980 and 1990 while representing about 13.2 percent of the population in 1980 while nonmetropolitan nonadjacent areas accounted for only 1.2 percent of the increase between 1980 and 1990 while accounting for 7.3 percent of the

population in 1980. On a comparative basis, then, nonmetropolitan areas showed the smallest relative population increases with their share of total change for 1980 to 1990 being only about one-sixth of their share of the population in 1980. As a result of these patterns, nonmetropolitan adjacent areas decreased their share of the population from 13.2 in 1980 to 12.1 percent in 1990 and nonmetropolitan nonadjacent areas decreased their share from 7.3 percent in 1980 to 6.3 percent in 1990.

The implications of the patterns of ethnic change among the four types of counties can be further explored by examining the change in the proportion of the population in different ethnic groups in the four county types (see Table 7). For the State as a whole, an examination of the data in Table 7 indicates that the Hispanic proportion increased about 4.6 percent and the proportion of the Other population increased by 0.8 percent from 1980 to 1990. On the other hand, the Anglo population's proportion decreased by 5.1 percent and the Black population by 0.3 percent.

Within county types, however, the patterns are more diverse. In central city counties, the proportion of Hispanics in the total population increased by almost 6 percent from 1980 to 1990 and the Other population increased by nearly 1.0 percent while the percentage decline was nearly 7.0 percent for Anglos and the Black population's proportion remained largely unchanged. In suburban counties, the proportion of Hispanics increased by about 1.9 percent, while the Anglo proportion declined by about 2.6 percent, the Black proportion declined by about 0.3 percent, and the Other population's proportion increased by about 1.0 percent. In the nonmetropolitan county types the Hispanic proportion increased by 3 percent, the Anglo population declined by about 3 percent and the Black and Other populations' proportions remained largely unchanged. It is evident,

then, that for most types of counties, Hispanic and Other population growth has made up for Anglo and, to a lesser extent, Black declines in relative proportions.

A final means of examining changes by the four county types is presented in the data in Table 8. An analysis of the data in this table highlights several important patterns. First, it is evident that metropolitan central city growth was largely fueled by the growth in the Hispanic population. Six of every ten persons added to the population in central cities were Hispanic. Equally important, and perhaps somewhat surprising, is the fact that nonmetropolitan growth, although small overall, was also dependent on the growth of Hispanic populations. In fact, in nonmetropolitan nonadjacent counties there was substantial Anglo population loss that was offset largely by growth in the Hispanic population. The Other population, although much smaller than the Hispanic population, also contributed disproportionately to growth in all types of counties. The Black population showed lower rates of growth than its share of the population in central city, suburban and nonmetropolitan nonadjacent areas and absolute decline in nonmetropolitan adjacent counties.

In suburban areas, the pattern is substantially different than that in other areas. Anglos accounted for nearly 72 percent of the growth in suburban counties compared to only 34 percent of growth statewide. For all other ethnic groups, the rate of their contribution to suburban growth is less than their impact at the State level. The net effect of such patterns is that suburbs are showing only relatively small increases in ethnic diversity relative to other types of areas.

Patterns of Ethnic Change in Metropolitan Statistical Areas

Tables 9 and 10 contain data for the combination of counties that are designated as Metropolitan Statistical Areas. The location and the counties included in each of these areas are shown in Figure 2.

An analysis of the data in Tables 9 and 10 suggests that population growth was substantial in many of the State's metropolitan areas. Eleven of the State's 28 metropolitan areas (as defined by the 1990 Census) showed percentage increases greater than the 19.38 percent experienced by the State as a whole. The largest numerical increase between 1980 and 1990 was in Dallas with an increase of 595,984 and in Houston with an increase of 566,171. The next largest increases occurred in Fort Worth-Arlington with an increase of 358,915, Austin (244,884) and San Antonio (230,145). In percentage terms, Austin's increase of 45.63 percent from 1980 to 1990 was the largest, followed by those in Fort Worth-Arlington (36.88%), McAllen-Edinburg-Mission (35.42%), Laredo (34.24%), Dallas (30.45%), and Bryan-College Station (30.21%).

The patterns of ethnic change are similar to those noted previously for counties. Every metropolitan area showed an increase in the number and proportion of its population that was Hispanic with 4 areas increasing their Hispanic populations by more than 100 percent and 8 others showing increases of 50 to 100 percent. Hispanics accounted for the largest numerical increase of any ethnic group from 1980 to 1990 in 17 of the State's 28 metropolitan areas.

Most notable among the relatively large areas, were the increases in Hispanic populations of more than 109 percent in both Dallas and Fort Worth-Arlington. Taken together, these data show that the Dallas and Fort Worth-Arlington areas increased their Hispanic populations by more than

271,000 from 1980 to 1990. Less dramatic on a percentage basis, but the largest in numerical terms, was the growth in the Hispanic population in Houston with an increase of 305,312 Hispanics from 1980 to 1990. In fact, 9 of every 10 Hispanics added to the Texas population from 1980 to 1990 were added to a metropolitan area's population. By 1990, Texas had five metropolitan areas which were more than 50 percent Hispanic--Brownsville-Harlingen (82%), Corpus Christi (52%), El Paso (70%), Laredo (94%) and McAllen-Edinburg-Mission (85%)--and one other metropolitan area, San Antonio, had a population that was nearly 48 percent Hispanic.

Anglos showed quite different patterns than those for Hispanics. On a proportional change basis (see Table 10), all of the State's metropolitan areas showed a decline between 1980 and 1990 in the proportion of their populations that were Anglo and seven areas showed absolute numerical declines in their Anglo population base. The largest percentage declines occurred in Odessa which lost 11.31 percent of its Anglo population from 1980 to 1990, and in Laredo (8.58%) and Beaumont-Port Arthur (7.95%). Several metropolitan areas did have large numerical and percentage increases in their Anglo populations, however. Dallas showed the largest numerical increase in its Anglo population from 1980 to 1990, 267,488 (18.62%), followed by Fort Worth-Arlington (219,607 or 27.97%) and Austin (146,717 or 38.21%).

Among Blacks, the patterns of change are very diverse across areas. Of the State's 28 metropolitan areas, 19 showed slower growth in their Black populations than the total rate of increase for the Black population at the State level (16.77%). The growth of the Black population was substantially more concentrated than that for any of the other ethnic groups. The largest increases were in Dallas which increased its Black

population by 89,186 and in Houston which increased its Black population by 86,401. In fact, these two areas alone accounted for 62 percent of all the persons added to the Black population between 1980 and 1990 while containing 50 percent of the total Black population in the State. The extent of concentration of Black population growth is even more apparent if one adds the increases in the Black populations of the two additional metropolitan areas of Fort Worth-Arlington which increased its Black population by 38,484 and Austin which showed an increase of 20,103. These four areas--Austin, Dallas, Fort Worth-Arlington, and Houston--contained 61 percent of the State's Black population in 1990 but accounted for 234,174 of the 283,818 increase in the Black population of the State; that is, for 83 percent of the total change in the Black population from 1980 to 1990.

The population in the Other ethnic group showed patterns similar to those for Hispanics. All but two metropolitan areas showed increases in the proportion of their populations in the Other ethnic category and six areas showed increases of more than 100 percent and another ten experienced increases of more than 50 percent. Houston has a substantially larger population in the Other racial category than any other metropolitan area with a population of 134,092 in 1990 (35 percent of all persons in the Other category in the State in 1990) and an increase of 66,680 (98.91%) from 1980 to 1990. The next largest population is in Dallas with a population of 78,080 in 1990 and an increase of 46,491 from 1980 to 1990, followed by Fort Worth-Arlington (36,043), Austin (21,340) and San Antonio (19,745). No other metropolitan area in the State had as many as 10,000 persons in the Other population category in 1990.

Taken together, the patterns for metropolitan statistical areas show that population increases for Hispanics have been large and pervasive

across areas resulting in nearly all areas showing increases in the proportion of their populations that are Hispanic. At the same time, all areas experienced declines in the proportions of their populations that were Anglo. Black population growth was relatively modest and highly concentrated in the State's largest cities. Growth in the Other population occurred in nearly all areas but was small in numerical terms. As for other parts of the State, growth in minority populations dominated population change in metropolitan areas in Texas in the 1980s.

Patterns of Change in Council of Government Regions

Council of Government (COG) regions are sets of contiguous counties that have been grouped for planning purposes. There are 24 such areas in Texas. Each generally includes a large city and surrounding counties. The analysis of such areas allows one to examine regional patterns for the entire State. The counties included in each COG area are shown in Figure 3. Since for several Council of Government Regions, the region is dominated by the patterns for one or several large metropolitan areas (such as the North Central Texas Region which contains Dallas and Fort Worth-Arlington or the Houston-Galveston COG which includes the Houston and Galveston MSAs), and these patterns have already been discussed above, we will only discuss those patterns that depart from those for metropolitan areas.

Tables 11 and 12 provide data for the COG regions. An analysis of these data indicate that it is the rural regions of the State which had the most difficulty retaining their populations from 1980 to 1990. Of the four COGs with population loss, three--the Panhandle, South Plains and Nortex regions--are among the most rural areas of the State while the fourth region showing loss--the Southeast Texas area--reflects the overall loss of

population which occurred in the Beaumont-Port Arthur area during the 1980s.

The data in these tables also show that the patterns noted in the analysis presented above are pervasive across all regions of the State. All regions show increases from 1980 to 1990 in the proportions of their populations that are Hispanic and decreases in the proportions that are Anglo. All but one COG increased the proportion of their populations made up of persons from Other ethnic groups. Seventeen of the 24 COGs show declines in the proportions of their populations that were Black. Finally, of the 24 regions, none showed declines in the number of Hispanics or in the number of persons in the Other ethnic category, but 11 COGs showed declines in the number of Anglos and 5 showed declines in their Black populations.

Overall, then, the data for COGs show no new patterns relative to those already indicated from the analysis of counties and metropolitan areas. They indicate, however, that the patterns described above are not restricted to only some counties and metropolitan areas but are pervasive across all regions of the State.

Ethnic Change in the Places (Towns and Cities) of Texas

In this section, we examine the patterns of 1980 to 1990 ethnic change among places (towns and cities) in Texas. Because of the large number of places in the State, such changes can only be highlighted in the discussion presented here by examining patterns across places grouped by size and by describing patterns for selected cities. Tables 13 and 14 present data on places grouped by their size in 1990 while Tables 15 and 16 present information on each of the individual towns and cities in the State showing populations in 1980 and 1990 and change from 1980 to 1990. Appendix B

shows all places in Texas ranked by the total population and by each of the Anglo, Black, Hispanic and Other populations in 1990.

An examination of the data in Tables 13 and 14 suggests that the patterns of ethnic change during the 1980s varied greatly by the size of the place and within each size of place by ethnic group. These data suggest that growth has been most rapid in the State's larger cities. Only places in the two size categories from 10,001 to 100,000 showed rates of percentage change that were greater than the State's total rate of growth while places in the largest size of place category showed the largest numerical increases.

When patterns of 1980 to 1990 change are examined by ethnic group within categories, it is evident that the contributions made by the different ethnic groups to total change has varied widely among the places of different sizes. Hispanic growth accounted for 29 percent of the increase in places of 1,000 or less; for 55 percent of the growth in places of 1,001 to 2,499; for 49 percent of the increase in places of 2,500 to 10,000; for 37 percent of the increase in places of 10,001 to 25,000; and for 34 percent of the increase in places between 25,001 and 100,000. In places of more than 100,000, Hispanics accounted for 690,593 or 74 percent of the 931,447 person increase that occurred from 1980 to 1990. Hispanics accounted for a larger proportion of all population change in the State (49%) than they did of the total population in 1980 or 1990 (21 percent and 25.5 percent, respectively) and accounted for a larger share of the total growth in each size of place category than their share of the population in each category in 1990.

Anglos by contrast accounted for a much smaller proportion of the growth than their proportion of the population in each size of place

category. In places of 1,000 or less, Anglos accounted for 80.20 percent of the population in 1990, but for 72.19 percent of the change from 1980 to 1990. For each of the other size of place categories, except that inclusive of the largest size places, Anglos accounted for 65 to 70 percent of the population in 1990 but accounted for only 41-46 percent of the net change in population from 1980 to 1990. The most startling pattern for Anglos, however, was that in the State's largest cities. Of the 931,447 increase in population from 1980 to 1990 in the population of the 19 places with more than 100,000 residents, only 28,380 was due to growth in the Anglo population. Anglos accounted for 49.35 percent of the population in such cities in 1990 (compared to 56.46 percent in 1980) but accounted for only 3.05 percent of the net population increase in these largest Texas cities from 1980 to 1990.

Among Blacks, population decline occurred in places of 1,000 or fewer residents and the proportion of the net change accounted for by Black residents was less than their share of the population in each of the two other categories of places with 10,000 or fewer residents. Blacks accounted for about 2 percent more of the increase in population from 1980 to 1990 than they were of the population in places of 10,001 to 100,000 in 1990. In the largest places, Blacks accounted for more than 16 percent of the population, but were only 13.3 percent of the increase in population from 1980 to 1990.

The Other population showed patterns similar to those for Hispanics, with those in the Other population category contributing more to the overall growth in each size of place category than they were of the population in each category. However, the impact of the Other population was clearly the largest in the larger size of place categories. In the two

categories of places with less than 2,500 persons, the rate of growth in the other population was only 1 to 2 percent larger than their share of the 1990 populations in these areas and were small overall (2.7 and 1.1 percent of the total change). In places with populations between 10,001 and 100,000, persons from Other ethnicity groups accounted for about 4 to 6 percent of the growth but were only 1 to 2 percent of the population. Finally, in places of more than 100,000, the Other population group made up only 2.8 percent of the population in 1990 (and 1.8% in 1980), but accounted for 9.5 percent of the growth. Clearly, although the number of persons in the Other population is relatively small (only 378,000 in 1990), its rate of growth was large from 1980 to 1990 and its distribution increased substantially in the 1980s.

As a result of these patterns, the ethnic proportions of populations in different size areas have changed substantially (see Table 14). The proportion of the population that is Hispanic increased in all size of places but was largest in the largest cities. Thus, in places with more than 100,000 persons, the proportion of the population that is Hispanic increased from less than 25 percent to more than 31 percent.

Among Anglos, significant declines in the proportions of Anglos were evident in nearly all size of place categories. Only in the smallest size of places (those with 1,000 persons or less) did Anglos remain at about the same proportion of the population in 1990 as in 1980 (about 80% in both 1980 and 1990). In the categories of places of 1,001 to 100,000, the proportion of Anglos declined between 4 and 5 percent, while in places of more than 100,000 residents the decline was 7 percent. These declines were sufficiently large such that, for the first time, in the State's largest

places (with more than 100,000 persons), Anglos were less than 50 percent of the population by 1990.

For Blacks, very small declines in proportions were evident in all size of places, except the two categories of 25,001 to 100,000 and 100,001 and larger for which the proportion of Blacks increased by about 0.5 percent in each category. For the Other population, there were increases in the proportions in all size of place categories with the increases being roughly 0.25 percent in the two categories of smallest places, 0.5 percent in places of 2,500 to 10,000 and about 1.0 percent in the three categories covering the largest places.

Tables 15 and 16 present information on individual places. These tables present data that show both the numbers of persons in each place in 1980 and 1990, 1980 to 1990 population change and the proportion of each place's population that were members of each ethnic group in 1980 and 1990. Because there are too many places to discuss individually, only general patterns, and patterns for some of the largest places, are discussed here. In addition, because the number of persons in the Other category is relatively small and highly concentrated in just a few cities, the discussion of patterns among the Other population group in individual cities is limited. Only six cities in Texas had 10,000 or more persons who were members of Other ethnic groups in 1990, and of the total number of 318,497 persons of Other ethnic groups living in places in Texas in 1990 (another 60,068 lived outside of places), nearly 50 percent lived in just these six cities. These cities were Houston (with 70,284 persons from Other groups), Dallas (25,775), Austin (15,764), San Antonio (13,276), Arlington (11,493), and Fort Worth (10,560).

Several general patterns are apparent in the data in Tables 15 and 16. First, it is evident that the patterns of rapid growth for Hispanics with less growth for Anglos and Blacks is relatively pervasive. Five hundred fifty-seven places showed declines in their total populations from 1980 to 1990, however, only 220 places showed declines in their Hispanic populations, 402 showed decline in their Black populations, and 702 places showed declines in their Anglo populations. As a result of such patterns, declines generally occurred in the proportion of Anglos in places while increases occurred in the proportions of Hispanics in the populations of places. For example, when 1980 and 1990 are compared, only 175 places showed increased proportions of Anglos in their populations, but 536 places showed increased proportions of Blacks and 982 places showed increases in the proportions of their populations that were Hispanic. The results in Tables 15 and 16 suggest that patterns described in the analysis of Tables 13 and 14 are pervasive across the towns and cities of Texas.

When data for individual ethnic groups within individual cities are examined, patterns of extensive diversity are evident. Among Anglos, the overall size of a place remains a relatively good predictor of the size of its Anglo population. Houston had the largest Anglo population in 1990 (662,642), followed by Dallas (479,980), San Antonio (339,115), Austin (287,166), Fort Worth (252,786), and Arlington (205,408). No other Texas city contained 200,000 or more Anglos in 1990. The patterns in the number and proportion of the Anglo population in these cities is changing dramatically, however. From 1980 to 1990, Houston's Anglo population declined by 171,419 (20.55%) and Dallas' Anglo population declined by 34,421 (6.69%). Fort Worth's Anglo population increased by only 8,259 (3.38%). On the other hand, San Antonio increased its Anglo population by

41,200 (13.83%) from 1980 to 1990, Austin's increased by 54,842 (23.61%), and Arlington's Anglo population by 60,471 (41.72%) from 1980 to 1990. As a result of such patterns, the proportion of Houston's population that was Anglo declined by 12 percent, Dallas' by nearly 9 percent, and the proportion of Fort Worth's population that was Anglo declined by 7 percent from 1980 to 1990. Houston's population in 1990 was only 40.64 percent Anglo, Dallas' 47.67 percent and Fort Worth's 56.47 percent Anglo. In fact, although Arlington, Austin and San Antonio had relatively large Anglo populations in 1990, and had increases in the size of their Anglo populations from 1980 to 1990, the proportion of Arlington's population that was Anglo actually declined by 12 percent from 1980 to 1990 due to more rapid growth in minority than in Anglo populations. Similarly, Austin's Anglo proportion decreased by nearly 6 percent and San Antonio's by about 1 percent.

Those areas that did experience relatively rapid growth in their Anglo populations were largely suburban. With the exception of Austin and San Antonio, the eight other areas with the largest Anglo population gains were all suburban cities (see Table 16) including Arlington, Plano, Carrollton, Mesquite, Bedford, Kingwood, The Woodlands, and Lewisville. On the other hand, those areas with the largest declines in Anglo populations were largely the State's older cities, Houston, Dallas, Beaumont, Pasadena, Odessa, Waco, Port Arthur, El Paso, Galveston, and Orange. As a result of such general patterns of change, by 1990, fully 227 of Texas places were less than 50 percent Anglo.

The patterns among Hispanics are very different than those for Anglos. Although the largest gain in the Anglo population for any place was the 60,471 increase in the Anglo population of Arlington, Houston's Hispanic

population increased by 169,152, Dallas' by 99,157, San Antonio's by 98,328, and El Paso's by 89,850. Twelve other cities increased their Hispanic populations by more than 10,000 persons. Equally dramatic is the fact that only one incorporated place (Carrizo Springs with a decline of 797) in the State showed a decline in its Hispanic population of more than 500 persons. Overall, 1,039 places showed increases in their Hispanic populations and Texas had 158 places in 1990 that were more than 50 percent Hispanic.

The patterns for the Black population reflect intermediate levels of change relative to Anglos and Hispanics. Houston continued to have the largest Black population with 447,144 Black residents, followed by Dallas (290,882), Fort Worth (96,928), San Antonio (63,260), Austin (55,824), and Beaumont (46,823). The cities showing the largest increases in population from 1980 to 1990 were Dallas with an increase in its Black population of 26,867, followed by Arlington (16,886), Austin (14,233), Houston (10,752), and Fort Worth (9,779). Only three incorporated places--Silsbee, Galveston, and University Park--showed losses of more than 500 Black residents. Thus, both the maximum numerical increases and decreases in the Black population from 1980 to 1990 were relatively small. Overall, of the 966 cities with 1990 Black populations, 543 or 56.2 percent showed population increases. As for other areas, the 1980 to 1990 population patterns for places show the Black population to be generally increasing and increasing more rapidly than the Anglo population but much less rapidly than the Hispanic or Other populations.

In sum, the patterns for places in Texas are similar to those for other geographic areas in the State. Increases from 1980 to 1990 in the Hispanic and Other ethnic populations were the most rapid and pervasive.

Increases in the Black population occurred in many places, although such increases were moderate in size and limited to only certain size of places. Anglo growth was very slow and declines in the Anglo proportions of populations in places were widespread. Patterns of minority growth were particularly pervasive in Texas largest cities with Anglos accounting for only three percent of the 1980 to 1990 change.

Conclusion

The data in this report show an increasingly diverse population in Texas. Texas minority population is growing rapidly, with increases among Hispanics being particularly large. Minority growth has been most extensive in the State's largest counties and places with increasing concentrations of minorities evident in central city areas. Suburbs have continued to grow largely as a result of increases in the Anglo population while nonmetropolitan areas grew relatively slowly and largely as a result of increases in their Hispanic populations. With further increases in minority populations projected for the future, it is likely that the diversification of the ethnic base of Texas population will continue.

Table 1: Texas Population and Percent Population Change
by Ethnicity, 1970-1990

Ethnic Category	Population			Percent Change		
	<u>1970*</u>	<u>1980</u>	<u>1990</u>	<u>1970-80</u>	<u>1980-90</u>	<u>1970-90</u>

Hispanic	2,059,671	2,985,824	4,339,905	45.0	45.4	110.7
Other	49,960	200,528	378,565	301.4	88.8	657.7
Total	11,195,416	14,229,191	16,986,510	27.1	19.4	51.7

* Because census respondents in 1970 were not asked a question regarding Spanish or Hispanic origin, the population values by ethnic categories were obtained from Spanish surname data from the sample portion of the census questionnaire. As a result, the sum of populations by ethnic category do not sum to the total population count for 1970.

Table 2: Proportion of Texas Population by Ethnicity 1970, 1980, and 1990, Numerical Change 1970 to 1980 and 1980 to 1990 by Ethnicity, and Proportion of Change 1970 to 1980 and 1980 to 1990 by Ethnicity

* The 1980 to 1990 Hispanic population percentage increase in West Odessa CDP is extraordinarily large, 135,175 percent. Because of this it is not reported in the table to avoid complications in the reporting of other information.

Table B-4: Population 1980 and 1990, Numerical Population Change 1980 to 1990 and Percent Change 1980 to 1990 in Places in Texas by Ethnicity Ranked by Black Population

* The 1980 to 1990 Hispanic population percentage increase in West Odessa CDP is extraordinarily large, 133.175 percent. Because of this it is not reported in the table to avoid complications in the reporting of other information.

- Appendix C

Populations in Counties and Places in Texas
by Race and Hispanic Origin 1980 and 1990

Table C-1: Texas Population 1980 and 1990, and Numerical Change and Percent Population Change 1980 to 1990 by Race and Hispanic Origin

	<u>Population</u>		<u>Population Change</u>	
	<u>1980</u>	<u>1990</u>	<u>Numerical</u>	<u>Percent</u>
Total Population	14,229,191	16,986,510	2,757,319	19.38
<u>Population by Race:</u>				
White	11,198,441	12,774,762	1,576,321	14.08
Black	1,710,175	2,021,632	311,457	18.21
American Indian	40,075	65,877	25,802	64.38
Asian	120,313	319,459	199,146	165.52
Other	1,160,187	1,804,780	644,593	55.56
<u>Hispanic Origin:</u>				
Hispanic	2,985,824	4,339,905	1,354,081	45.35
NonHispanic	11,243,367	12,646,605	1,403,238	12.48

Table C-2: Proportion of Texas Population 1980 and 1990
and Proportion of Change 1980 to 1990 by Race
and Hispanic Origin

	<u>Proportion of Population</u>		<u>Proportion of Change</u>
	<u>1980</u>	<u>1990</u>	<u>1980-90</u>
Total	100.0	100.0	100.0
<u>Percent by Race:</u>
